TABLE S1

Outcome classification by interview year and prediction horizon. Counts are mutually exclusive at the main category level. Indented rows are subsets, not additional participants. Death by the final wave excludes a participant regardless of prior dementia. Positive and negative correspond to outcome Y equal to 1 and 0, respectively.

Classification / outcome rule	**Outcome status**	**2000: 6-year (2000–2006)**	**2000: 8-year (2000–2008)**	**2010: 6-year (2010–2016)**	**2010: 8-year (2010–2018)**
Eligible at baseline	Baseline	17,336	17,336	19,243	19,243
Analytic cohort	Positive or negative	13,246	12,236	14,123	11,603
Incident dementia	Positive	1,181	1,309	1,163	1,039
First dementia observation after a missing intermediate assessment	Positive	51	98	53	52
Confirmed non-dementia at the final wave	Negative	12,065	10,927	12,960	10,564
Confirmed at final assessment after a missing intermediate assessment	Negative	407	580	464	478
Loss to follow-up (no final interview and no assignable outcome)	Excluded	1,212	1,223	2,291	3,818
Unresolved after final interview	Excluded	1	1	3	2
Died by the final wave	Excluded	2,877	3,876	2,826	3,820
With observed dementia	Excluded	403	702	427	690
Without observed dementia	Excluded	2,474	3,174	2,399	3,130
